Gear Ratio - $\frac{\text{No. of driven gear teeth}}{\text{No. of driving gear teeth}}$

Spur gear with gear A having 20 teeth and gear B having 40 teeth.

$$G.R \Rightarrow \frac{20}{40} = 1:2$$

① Write a prgm to store 10 nos in a list. Pick even nos & store it tuple T1, pick odd nos & store it in tuple T2

② WAP to store 12 nos in a tuple. Unpack the tuple and store it L1. T1 → (has ending in 3)
L2 (others)
Sum of elements in L1
Sort elts in L2 in decrease.

③ WAP to store 15 elts in a tuple. Unpack the tuple and store it in L1. Filter the prime nos and store it in T2. & in L2 it should contain others nos. At the end of L2 extend tuple. T2 & in L3, combine L2 and append the sum of elements in T2.

④ WAP to store 10 nos in a list. Sort the list, search for an element in the list, update all position whes elt is doubled.

⑤
