Quiz Presentation

10 Multiple Choice Questions

One question per slide $\rightarrow$ Answer on the next

Question 1

Question

Which of the following statements best describes a robot?

a. A device that performs a specific task without adaptability

b. An advanced machine capable of sensing, decision-making, and interaction

c. A mechanical tool used for manual tasks

d. A device that requires constant human supervision

Answer 1

Question

Which of the following statements best describes a robot?

Correct Answer

b. An advanced machine capable of sensing, decision-making, and interaction

Question 2

Question

What distinguishes a cobot from a traditional robot?

a. Cobots are bigger in size as compared to traditional robots.

b. Cobots can only perform simple tasks, while traditional robots are more versatile.

c. Cobots emphasise collaboration and interaction with humans, while traditional robots often work autonomously.

d. Traditional robots are fully autonomous, while cobots require constant human control.

Answer 2

Question

What distinguishes a cobot from a traditional robot?

Correct Answer

c. Cobots emphasise collaboration and interaction with humans, while traditional robots often work autonomously.

Question 3

Question

Which of the following is an essential characteristic of a machine?

a. Adaptability and interaction with the environment

b. Autonomous decision-making capabilities

c. Ability to perform complex tasks collaboratively

d. Specific functionality for a particular task

Answer 3

Question

Which of the following is an essential characteristic of a machine?

Correct Answer

d. Specific functionality for a particular task

Question 4

Question

How do cobots contribute to the progress from robots to more collaborative systems?

a. By eliminating the need for human workers

b. By increasing the efficiency of traditional robots

c. By providing human interaction and safer work environments

d. By reducing the overall cost of automation

Answer 4

Question

How do cobots contribute to the progress from robots to more collaborative systems?

Correct Answer

c. By providing human interaction and safer work environments

Question 5

Question

Which of the following is a characteristic of a machine?

a. Ability to sense and adapt to the environment

b. Collaborative interaction with humans

c. Performing tasks based on programmed instructions

d. Continuous learning and improvement

Answer 5

Question

Which of the following is a characteristic of a machine?

Correct Answer

c. Performing tasks based on programmed instructions

Question 6

Question

A sewing machine is an example of which of the following options?

a. Machine

b. Robot

c. Cobot

d. None of these

Answer 6

Question

A sewing machine is an example of which of the following options?

Correct Answer

a. Machine

Question 7

Question

Why are cobots important in industrial settings?

a. They are expensive.

b. They improve productivity by replacing human workers.

c. They provide a safer working environment and enable human-robot collaboration.

d. None of these

Answer 7

Question

Why are cobots important in industrial settings?

Correct Answer

c. They provide a safer working environment and enable human-robot collaboration.

Question 8

Question

Which of the following is an example of a multi-robot system?

a. Robots for smart home

b. Robots for smart office

c. Robots for firefighting

d. All of these

Answer 8

Question

Which of the following is an example of a multi-robot system?

Correct Answer

d. All of these

Question 9

Question

Which is not true for a multi-robot system?

a. Multiple robots

b. Network connection

c. No human interaction

d. None of these

Answer 9

Question

Which is not true for a multi-robot system?

Correct Answer

c. No human interaction

Question 10

Question

Which is not an example of a machine?

a. Washing device

b. Printing device

c. Automatic floor cleaning device

d. None of these

Answer 10

Question

Which is not an example of a machine?

Correct Answer

c. Automatic floor cleaning device

Note: An automatic floor cleaning device (e.g., a robot vacuum) typically has sensing, navigation, and decision-making capabilities, classifying it as a robot rather than a simple machine.
