WORKSHEET: STRING HANDLING

SECTION A: CODE OUTPUT QUESTIONS

Q1. What will be the output of following code?

```
str = "hello"
print(str[:2])
```

Q2. What will be the output of following code?

```
str = 'Hello'
res = ""
for i in range(len(str)):
    res = res + str[i]
print(res)
```

Q3. What will be the output of following code?

```
s = 'Hi!'
s1 = 'Hello'
s2 = s[:2] + s1[len(s1)-2:]
print(s2)
```

Q4. What will be the output of following code?

```
print('ba' + 'na' * 2)
```

Q5. What will be the output of following code?

```
s = 'Welcome to python4csip.com'
print(s.find('come'))
print(s.count('o'))
```

Q6. What will be the output of following program?

```
s = 'Hello'
for i in s:
    print(i, end='#')
```

Q7. What will be the output of following program?

```
for i in 'hardik':
    print(i.upper())
```

Q8. What will be the output of following program?

```
s = 'Hello'
for i in s:
    print('Welcome')
```

Q9. What will be the output of following program?

```
str = 'virat'
for i in str:
    print(str.upper())
```

Q10. What will be the output of following program?

```
a = 'hello'
b = 'virat'
for i in range(len(a)):
    print(a[i], b[i])
```

Q11. What will be the output of following program?

```
a = 'hello'
b = 'virat'
for i in range(len(a)):
    print(a[i].upper(), b[i])
```

Q12. What will be the output of following program?

```
print("xyyzxyzxzxyy".count('xyy', 2, 11))
```

Q13. What will be the output of following program?

```
print("hello" + 1 + 2 + 3)
```

Q14. What will be the output of following program?

```
str1 = "PYTHON4CSIP.COM"
print(str1[1:4], str1[:5], str1[4:], str1[0:-1], str1[:-1])
```

Q15. What will be the output of following program?

```
str = "my name is kunfu pandya"
print(str.capitalize())
```

Q16. What will be the output of following program?

```
str1 = 'Hello'
str2 = 'World!'
print('str1 + str2 = ', str1 + str2)
print('str1 * 3 =', str1 * 3)
```

Q17. What will be the output of following program?

```
count = 0
for letter in 'Hello World':
    if letter == 'l':
        count += 1
print(count, 'letters found')
```

Q18. What will be the output of following program?

```
s = "python4csip"
n = len(s)
m = ""
for i in range(0, n):
    if s[i] >= 'a' and s[i] <= 'm':
        m = m + s[i].upper()
    elif s[i] >= 'n' and s[i] <= 'z':
        m = m + s[i-1]
    elif s[i].isupper():
        m = m + s[i].lower()
    else:
        m = m + '#'
print(m)
```

Q19. What will be the output of following program?

```
a = "Mahender Singh Dhoni"
a = a.split()
b = a[0][0] + "." + a[1][0] + "." + a[2]
print(b)
```

Q20. What will be the output of following program?

```
s = 'Mahender, Singh, Dhoni'
s1 = s.split()
for i in s1:
    print(i)
```

Q21. What will be the output of following program?

```
print("Welcome to Python4csip.com".split())
```

Q22. What will be the output of following program?

```
str = 'Hello Python'
print(str)
print(str[0])
print(str[2:8])
print(str[3:])
print(str * 3)
print(str + "String")
```

Q23. What will be the output of following program?

```
line = "PYTHON IS EASY TO LEARN"
L = line.split('a')
for i in L:
    print(i, end=' ')
```

Q24. What will be the output of following program?

```
s = 'mahender, singh, dhoni'
s1 = s.split()
for i in s1:
    if i > 'n':
        print(i.upper())
    else:
        print(i)
```

Q25. What will be the output of following program?

```
my_string = 'PYTHON4CSIP'
for i in range(len(my_string)):
    print(my_string)
    my_string = '#'
```

Q26. What will be the output of following program?

```
str = "Python4csip.com"
for i in range(len(str)):
    if str[i].isalpha():
        print(str[i-1], end="")
    if str[i].isdigit():
        print(str[i], end="")
```

Q27. What will be the output of following program?

```
str = "AB145CVD124N"
for i in range(len(str)):
    if str[i].isalpha():
        print(str[i-1], end="")
    if str[i].isdigit():
        print('#', end="")
```

Q28. What will be the output of following program?

```
str = "PYTHON4CSIP"
for i in range(len(str)):
    if str[i].isdigit():
        print(str[i], end="")
    if str[i] == 'N' or str[i] == 'Y':
        print('#', end="")
```

SECTION B: PYTHON PROGRAMMING QUESTIONS

Q29. Write a Python program to count the number of vowels in a given string.

Q30. Write a Python program to take in a string and replace every blank space with a hyphen.

Q31. Write a Python program to calculate the length of a string without using built-in library functions.

Q32. Write a Python program to calculate the number of words and the number of characters present in a string.

Q33. Write a Python program to take in two strings and display the larger string without using built-in functions.

Q34. Write a Python program to count the number of lowercase characters in a string.

Q35. Write a Python program to check if a string is a palindrome or not.

Q36. Write a Python program to calculate the number of upper case letters and lower case letters in a string.

Q37. Write a Python program to calculate the number of digits and letters in a string.

Q38. Write a Python program to form a new string made of the first 2 and last 2 characters from a given string.

Q39. Write a Python program to count the occurrences of each word in a given string sentence.

Q40. Write a Python program to check if a substring is present in a given string.

Q41. Write a Python program to check the first occurrence of a character in a string.

Q42. Write a Python program to find the ASCII value of a character.

Q43. Write a Python program to remove the last occurrence of a character in a string.
