Objective Type (MCQs and One-word Answers) – STRINGS in PYTHON

1 .What will be the output of the following code?

```
s = "Hello, World!"
print(s[7])
```

a) W b) o c) l d) r

2. Which method is used to convert all characters of a string to uppercase?

a) uppercase() b) toupper() c) upper() d) capitalize()

3.What will be the output of:

```
s = "CBSE Computer"
print(s[5:13])
```

a) Computer b) omputer c) CBSEComp d) CComputer

4. **The output of:** print(len("Class 12")) is:

a) 8 b) 7 c) 9 d) Error

5.**Which method returns the index of the first occurrence of a substring?**

a) search() b) index() c) find() d) locate()

6. **Which of the following is a valid string declaration?**

a) s = 'Python" b) s = Python c) s = 'Python' d) s = 'Python"Hello'

7.**Which method replaces a string with another string?**

a) swap() b) replace() c) update() d) edit()

8.**The output of:** print("Hello".lower()) is:

a) HELLO b) hello c) Hello d) error

9.**What will be the result of print("abc" + "123")?**

a) abc123 b) abc 123 c) abc+123 d) error

10. Which function checks if all characters in a string are digits?

a) isdigit() b) isnum() c) isnumeric() d) Both a and c

Short Answer Type Questions

11. **Write a Python statement to extract the last 3 characters from a string name.**
12. **What is the difference between isalpha() and isalnum()?**
13. **Write a code to count the number of vowels in a given string.**
14. **How do you check whether a string starts with a specific substring in Python?**
15. **Write a statement to remove white spaces from the beginning and end of a string.**
16. **Predict the output:**

```
s = "Python Programming"
print(s[::-1])
```

17. **What does the in operator do in the context of strings?** Give an example.
18. **Write a Python function to check whether a string is a palindrome.**
19. **Give output:**
    text = " Hello Students "
    print(text.strip())
20. **Write a program to count how many times the word "India" appears in a sentence.**

Class 11 Python – String Slicing Assignment (15 Questions)

Given: text = "WelcomeToCBSEClass12"

Use the above string text for all slicing-related questions below.

String Slicing Questions

1. **Extract the word Welcome from the string.**
2. **Extract the word CBSE using positive indexing.**
3. **Extract the word Class12 using negative indexing.**
4. **Write a slice that returns the string ToCBSE.**
5. **Write the slice that extracts characters from index 7 to 10 (inclusive).**
6. **Write a slice to extract every second character from the full string.**
7. **Reverse the entire string using slicing.**
8. **Extract WelcomeTo using slicing.**
9. **Write a slice to get all characters from index 11 till the end.**
10. **Write a slice to get all characters from the beginning to index 6 (inclusive).**
11. **Extract the last 5 characters using negative indexing.**
12. **Write a slice that skips one character each time starting from index 0.**
13. **Slice the string to exclude the first 3 and last 3 characters.**
14. **Extract the word ToCBSEClass using slicing.**
15. **Write a slicing statement that results in an empty string.**

? CBSE Class 12 – String Quiz Answers

Objective Type (MCQs and One-word Answers)

1. **a) W**
   ➤ Index 7 of "Hello, World!" is 'W'.

2. **c) upper()**
   ➤ Converts all characters to uppercase.

3. **a) Computer**
   ➤ "CBSE Computer"[5:13] gives "Computer".

4. **a) 8**
   ➤ "Class 12" has 8 characters (including space).

5. **c) find()**
   ➤ find() returns index of first occurrence or -1 if not found.

6. **c) s = 'Python'**
   ➤ Only this is a valid string (enclosed in matching quotes).

7. **b) replace()**
   ➤ Replaces occurrences of a substring.

8. **b) hello**
   ➤ "Hello".lower() returns 'hello'.

9. **a) abc123**
   ➤ String concatenation.

10. **d) Both a and c**
    ➤ isdigit() and isnumeric() both check for numeric characters.

Short Answer Type Questions

11. **name[-3:]**
    ➤ Extracts last 3 characters.

12. **isalpha() checks only alphabets; isalnum() checks alphabets and digits.**

13. python

vowels = "aeiouAEIOU"
count = sum(1 for ch in s if ch in vowels)

14. **Use `startswith()` method:**

    ```python

    s.startswith("Hello")
    ```

15. **`s.strip()`**

➤ Removes whitespaces from both ends.

16. **Output: `'gnimmargorP nohtyP'`**

➤ Reverse of the string.

17. **Checks for presence:**

```python
"com" in "computer"  # True
```

18. ```python

```
def is_palindrome(s):
    return s == s[::-1]
```

19. **Output:** 'Hello Students'
    ➤ Strips leading/trailing spaces.

20. python

CopyEdit

```
sentence = "India is great. India is diverse."
print(sentence.count("India")) # Output: 2
```
