Worksheet – I Strings in Python

1) Python does not support a character type; a single character is treated as strings of length one.

a. False b. True c. Error d. None of the mentioned

2) What will be the output?

```
str1="6/4"
print("str1")
```

A. error B. 6/4 C. 1.5 D. str1

3) Which of the following will result in an error?

```
str1="python"
```

A. print(str1[2]) B. str1[1]="x" C. print(str1[0:9]) D. Both (b) and (c)

4) What will be the output of below Python code?

```
str1="Information"
print(str1[2:8])
```

A. format B. formati C. nforma D. ormat

5) Which of the following will give "Simon" as output? If str1="John,Simon,Aryan"

A. print(str1[-7:-12]) B. print(str1[-11:-7])
C. print(str1[-11:-6]) D. print(str1[-7:-11])

6) What would the following code print?

```
Mali = 5
print("Mali" + " is " + str(Mali))
```

A. Mali is Mali B. Mali is 5 C. 5 is Mali D. 5 is 5

7) What is printed by the following statements?

```
s = "python rocks"
print(s[7:11] * 3)
```

A. rockrockrock B. rock rock rock
C. rocksrocksrocks D. TypeError, you cannot use multiplication with slicing.

8) What will be printed when the following executes?

```
str = "This is fun"
str = str[5]
print(str)
```

A. I B. ' ' C. is fun D. This is fun

9) What will be the output of the following Python statement? >>>"a"+"bc"

a) a bc b) bc c) bca d) abc

10) What arithmetic operators cannot be used with strings?

a) + b) * c) - d) All of the mentioned

11) What will be the output of the following Python statement? >>>print('new' 'line')

a) Error b) Output equivalent to print 'new\nline'
c) newline d) new line

12) What will be the output of the "hello" +1+2+3?

a) hello123 b) hello c) Error d) hello6

13) s="hello" what will be the return value of type(s)?

a) int b) bool c) str d) String

14) What function do you use to read a string?

a) input("Enter a string") b) eval(input("Enter a string"))

c) enter("Enter a string") d) eval(enter("Enter a string"))

15) Which line of code produces an error?

a) "Python" + "12" b) 'Python' + 16 c) 3 + 7 d) 'Python' + "21"

16) Consider the string str="Green Revolution" choose the correct statements in the python to implement the following in question,Display last four characters

(a) str[-4:] (b) str[:-4:] (c) str[: :] (d) str[: : -4]

17) How many times is the word "HELLO" printed in the following statement?

```
s='python rocks'
for ch in s[3:8]:
    print('Hello' )
```

(a) 6 (b) 5 (c) infinite (d) 8

18) (A) Assertion : b = "Hello, World!" print(b[:5]) will give output "Hello"

(R) Reason : This will give get the characters from start position(5 not included)

(a) A is true but R is false (b) A is true and R is correct explanation of A

(c) A and B both are false (d) A is true but R is not correct explanation of A

19) Statement (1) As we know that strings are immutable. We cannot delete or remove the characters from the string.

Statement (2) But we can delete the entire string using the del keyword

(a) Statement 1 and Statement 2 both are true

(b) Both statement 1 and 2 are false

(c) statement 1 is false and Statement 2 is true

(d) statement 1 is true and Statement 2 is false

20) (A) Assertion str1="Hello" and str1="World" then print(str1*3) will give error

(R) Reason : * replicates the string hence correct output will be HelloHelloHello

(a) A is true but R is false (b) A is true but R is not correct explanation of A

(c) A and B both are false (d) A is false and R is correct

21) What is the output of the following program?

```
my_string = 'Python'
for i in range(my_string):
    print(i)
```

a) 0 1 2 3 … 12 b) No Output c) Error d) Python

22) What is the output of the following program?

```
x = 123
for i in x:
   print(i, end=" ")
```

a. 1 2 3 b. 1 1 c. Error d. no output

23) For strings, the symbol + means _____.

a. addition b. swap c. concatenation d. slicing

24) What is the output of the following code?

```
str1='101'
x=int(str1)
z=x+400
print(z)
```

a. 101400 b. x400 c. 501 d. none of above

25) The index of a string begins with _____.

a. 1 b. 0 c. a d -1

26) What will the output be from the following code?

```
print("Hello" + str(2) + "world!")
```

Hello world! Hello world!

Hello2world!

Hello Hello world! world!

SyntaxError

27) Joining elements together to make a string is called what?

a. Combining b. Connecting c. Concatenation d join()

28) In python, string + and * represents which of the following operations?

a. concatenation, Replication b. Addition, Multiplication

c. Neither (a) or (b) d. Both (a) or (b)

29) Which of the following is not a Python legal string operation?

a. 'abc' + 'ABC' b. 'abc'*3 c. 'abc'+3 d. none of above

30) Which of the following is the correct syntax of string slicing?

a. s[start:end] b. s[start:step] c. s[step:end] d. s[step:start]

31) How many times is the word 'Python' printed in the following statement?

```
s='I love Python'
for ch in s[3:8]:
        print('python')
```

a. 11 b. 8 c. 3 d. 5

32. To concatenate means to _____.

a. replicate b. join c. split d. multiply

33. What is the correct python code to display the last four characters of 'Digital India'?

a. s[-4:] b. s[4:] c. s[*4] d. s[-1:4]

34. which operator use to compare two strings.

a. >* b. + c. === d ==

35. In the membership operator, It returns true if a character/ substring exists in the given string.

a. in operator b. not operator c. not in operator d. none of above

Worksheet – II Strings in Python

1) Write the output of the following.

```
>>> a = "Blog"
>>> a ='a'
>>> print(a)
```

a. Bloga b. aBlog c. Error d. a

2) What is the index value of 'i' in string "Learning"

a. 5 b. 3 c. 6 d. 4

3) Index value in String should be of type _____.

a. Float b. Integer c. String d. Boolean

4) string traversal can be done using 'for' loop only.(T/F)

a. True b. False

5) Which operator is used with integers as well as with strings?

a. / b. // c. ** d. *

6) Write the output of the following:

```
>>> 2 + '3'
```

a. 2 3 b. 23 c. SyntaxError d. TypeError

7) Which operator is used for string concatenation?

a. * b. // c. + d. -

8) Write the output of the following code:

```
s="blog"
for i in range(-1,-len(s),-1):
    print(s[i],end="$")
```

a. golb b. gol$ c. Error d. None of the above

9) Write the output of the following code:

```
>>> s= "str"
>>> s1 = "string"
>>> print(s1 in s)
```

a. True b. False c. Error d. None of the above

10) Write the output of the following code:

```
>>> print("Amita" > "amit")
```

a. True b. False c. Error d. None of the above

11) What is the ASCII value of "A"?

a. 97 b. 66 c. 65 d. 96

12) Write the output of the following code:

```
>>> print("Str"[1:2])
```

a. t b. No Output c. Error d. None of the above

13) Which of the following function returns the ASCII/Unicode value character?

a. asc( ) b. ord( ) c. asci( ) d. ascii( )

14) Which of the following statements will also return the same result as given statement?

```
>>> print("Computer" + "Computer")
```

a. print("Computer" , " ", "Computer") b. print("Computer","Computer")

c. print("Computer" **2) d. print("Computer" * 2)

15) A _____ can be created by enclosing one or more characters in single, double or triple quote.

a. String b. List c. Tuple d. Dictionary

16) Characters in a string can be _____ enclosed in quotes.

a. Digits b. white space c. letter d. All of the above

17) Each individual character in a string can be accessed using a technique called _____.

a. Indexing b. Replication c. Concatenation d. None of the above

18) If we give index value out of the range then we get an _____.

a. ValueError b. SyntaxError c. IndexError d. Error

19) Write the output of the following.

```
str = "python"
print(str[2+1])
```

a. t b. h c. th d. Error

20) Python allows _____ operations on string data type.

a. Concatenation b. Membership c. Slicing d. All of the above

21) Write the output of the following.

```
>>> str1 = 'Hello World!'
>>> 'w' in str1
```

a. True b. False c. No d. None of the above

22) _____ method is used to access some part of a string or substring.

a. Slicer b. Slicing c. Membership d. None of the above

23) str[5 : 11] will return _____ characters.

a. 5 b. 6 c. 11 d. None of the above

24) print('Welcome TO My Blog'[2:6] + 'Welcome TO My Blog'[5:9]) will display _____.

a. lcomme T b. lcomme c. lcomme To d. None of the above

25) Select the wrong option in reference to the statement given below:

(operand1) * (operand2) → No error

a. Both operands can be of type integer

b. operand1 can be of type integer and operand2 can be of type string

c. operand1 can be of type string and operand2 can be of type integer

d. Both operands can be of type string

Worksheet – III Strings in Python

1) The ____ function returns the exact copy of the string with the first letter in uppercase.
(a) find() (b) copy() (c) upper() (d) capitalize()

2) Find the output of the following.
```
>>> word="green vegetables"
>>> print(word.find('veg',2)
```
(a) 8 (b) 6 (c) 10 (d) 12

3) Which of the following will result in an error?
```
>>> str1="python"
```
A. print(str1[2]) B. str1[1]="x" C. print(str1[0:9]) D. Both (b) and (c)

4) Given a string example="hello" what is the output of example.count('l')
(a) 2 (b) 1 (c) None (d) 0

5) Which of the following will give "Simon" as output? If str1="John,Simon,Aryan"
A. print(str1[-7:-12]) B. print(str1[-11:-7])
C. print(str1[-11:-6]) D. print(str1[-7:-11])

6) What is the output of the following code?
```
>>> example="helloworld"
>>> example[::-1].startswith("d")
```
(a) dlrowolleh (b) True (c) - (d) None

7) What is the output of the following?
```
>>> print("xyyzxyzxzxyy".count('xyy', 2, 11))
```
(a) 2 (b) 0 (c) 1 (d) error

8) What is "Hello".replace("l", "e")
(a) Heeeo (b) Heelo (c) Heleo (d) None

9) What is the output of the following?
```
>>> print("xyyzxyzxzxyy".endswith("xyy", 0, 2))
```
(a) 0 (b) 1 (c) True (d) False

10) What is the output of the following? >>> print('ab12'.isalnum())
(a) True (b) False (c) None (d) Error

11) What is the output of the following? >>> print('a B'.isalpha())
(a) True (b) False (c) None (d) Error

12) What is the output of the following? >>> print(' '.isdigit())
(a) True (b) False (c) None (d) Error

13) What is the output of the following? >>> print('a@ 1,'.islower())
(a) True (b) False (c) None (d) Error

14) What is the output of the following?
```
>>> print('abcd@efcd@ghcd'.split('@'))
```
(a) ['abcd', '@', 'efcd', '@', 'ghcd'] (b) ['abcd@', 'efcd@', 'ghcd']
(c) ['abcd', 'efcd', 'ghcd'] (d) Error

15) myTuple = ("Joe", "Peter", "Vicky")
x = "#".join(myTuple)
print(x) will produce output
(a) Joe#Peter#Vicky (b) #JoePeterVicky
(c) JoePeterVicky (d) JohnPete#Vicky#

16) What is the output of the following?

```
>>> print('Ab!2'.swapcase())
```

(a) AB!@ (b) ab12 (c) aB!2 (d) aB1@

17) Choose the correct function to get the character from ASCII number

(a) ascii(number) (b) char(number) (c) chr(number) (d) ord(' a ')

18) Select the correct output of the following String operations.

```
>>> str1 = "my isname isisis jameis isis bond"
>>> sub = "is"
>>> print(str1.count(sub, 4))
```

(a) 5 (b) 6 (c) 7 (d) 0

19) Which method removes all the trailing whitespaces from the right of the string?

(a) strip( ) (b) remove( ) (c) lstrip( ) (d) rstrip( )

20) Which of the following is not a String built in functions?

a. isupper( ) b. lower( ) c. partition( ) d. swapcases( )

21) Write the output of the following:

```
>>> str1 = 'India is a Great is Country'
>>> str1.partition('is')
```

a. ('India ', 'is', ' a Great is Country') b. ('India ', 'is', 'a Great', 'is', 'Country')

c. ('India ', 'is', ' a Great Country') d. Error

22) partition( ) function of string in python return the result in the form of _____.

a. String b. List c. Tuple d. Dictionary

23) Which of the following function returns True if the string is non-empty and has all uppercase alphabets.

a. islower( ) b. isupper( ) c. Islower( ) d. istitle

24) Read the statements given below and identify the right option.

Statement A : Python has two membership operators 'in' and 'not in'

Statement B : The 'in' operator takes two strings and returns False if the first string appears as a substring in the second string, otherwise it returns True .

a. Statement A is correct.

b. Statement B is correct.

c. Statement A is correct, but Statement B is incorrect.

d. Statement A is incorrect, but Statement B is correct.

25) Read the statements given below and identify the right option

Statement A : Python allows an index value to be negative also.

Statement B : Negative indices are used when we want to access the characters of the string from left to right.

a. Statement A is correct.

b. Statement B is correct.

c. Statement A is correct, but Statement B is incorrect.

d. Statement A is incorrect, but Statement B is correct.
